

We provide Waste to Wealth Solutions in partnership with our Spanish technical partner, **ECO HISPANICA I MAS MEDIOAMBIENTAL, SL** which is a world leader in this field.

Ecohispanica offers the most advanced complete Waste management disposal solution in a completely green and ecological friendly manner. This technology allows the plant to process unsorted household waste and that of commercial nature into recyclable materials such as Aluminum, Ferrous materials, plastics and glass which can be sold. The rest of the waste is broken down through a state of the art steam technology into a biomass which is then converted into organic fertilizer. There are no emissions or odours released into the environment.

Benefits of Ecohispanica Municipal Solid Waste Treatment Technology.

- A fraction of the cost (approximately ¼) of a comparable incinerator plant, with much lower operating cost using new, proven technology.
- A continuous, non-stop process that ensures production is infinitely faster.
- Modular design, enabling total flexibility to accommodate future increases in population size and any requirement for a change of location.
- Resultant biomass is sanitized and ready for immediate processing into fertilizer or bio-ethanol fuel.
- Technology is patented worldwide.
- The project is self sustaining as exceptional profits can be made from recycled materials like Aluminum, Plastic, Glass, Ferrous materials.
- Very clean technology as toxins or odours are not released into the atmosphere. The facility features a patented odour control system. more info
